Confidently deliver the foundation student nurses need for sound nursing care of children and their families with Essentials of Pediatric Nursing, Fourth Edition. A unique concept-based approach and nursing process focus help students go from concept to application by building on prior knowledge, establishing an understanding of broad concepts before instilling the ability to solve problems in complex situations. Supported by Interactive Case Studies, Unfolding Case Studies, Clinical Reasoning Alerts and other active learning features, this accessible text emphasizes active, conceptual learning to help you make the most of your class time and foster essential critical thinking throughout your course. NEW! Clinical Reasoning Alerts promote critical thinking in the nursing process and strengthen students' clinical reasoning. NEW! Unfolding Patient Stories, written by the National League for Nursing, foster meaningful reflection on commonly encountered clinical scenarios. Atraumatic Care sections throughout deliver helpful tips for providing atraumatic care to children in relevant situations. Take Note! features alert students to especially critical information in each chapter. Consider This! prompts engage students in commonly encountered real-life scenarios to enhance their critical thinking and clinical reasoning. Thinking About Development boxes highlight relevant special development concerns. Healthy People 2030 boxes help students connect pediatric nursing practices to the achievement of these objectives. Evidence-Based Practice boxes familiarize students with recent evidence-based research findings and related recommendations for practice. Teaching Guidelines equip students to effectively educate children and their families about various pediatric nursing issues. Drug Guides enable fast reference of actions, indications and significant nursing implications for commonly used medications in pediatric care. Common Laboratory and Diagnostic Tests and Common Medical Treatments tables guide students through the diagnostic process and detail common medical or surgical treatments for a broad range of disorders. Nursing Procedures provide step-by-step guidance for pediatric variations on common nursing procedures. Concept Mastery Alerts clarify pediatric nursing concepts and improve students' understanding of potentially confusing topics identified by Lippincott® PrepU adaptive learning data. Developing Clinical Judgment sections coach students to apply clinical judgment to specific chapter concepts and scenarios. Practicing for NCLEX NCLEX-RN®-style review questions strengthen students' exam readiness and highlight areas needing further review. NEW! 15 Practice and Learn Growth and Development Case Studies on thePoint provide essential practice evaluating the appropriate course of action for real-life clinical scenarios. NEW! 15 Skill-based Pediatric Videos available on thePoint clarify key concepts and skills in growth and development, communicating with children and providing nursing care to the child in the hospital.

This updated and refined new edition is the only book to provide a comprehensive approach to the intensive care of neurologically injured patients from the emergency room and ICU through the operating room and post-surgical period. It reviews neuroanatomy, neuroradiology, and neurophysiology, examines the neurological problems most frequently seen in intensive care, and describes the various types of neurosurgery. General issues are discussed, such as cardiac care, fluids and electrolytes, nutrition, and monitoring as well as more specific conditions and complications including elevated intracranial pressure, seizures, and altered mental states.

Noninvasive Vascular Diagnosis comprehensively covers all aspects of noninvasive evaluation of the circulatory system in the extremities. The increasing popularity of noninvasive techniques is not reflected in the number of comprehensive works on the topic and it is clear from the success of the first edition that the demand for an updated volume is increasing. This large format book is the definitive text written by the expert editors and contributors. It is well supported by exceptional illustrative material, producing the definitive work in the field. The book is invaluable to all those who work in vascular laboratories as well as internists, cardiologists, vascular laboratory directors and staff, general surgeons involved in vascular surgery and the vascular surgery community in general.

This Monograph discusses conventional and innovative ventilator modalities, adjuvant therapies, modes of extracorporeal respiratory support, and weaning from mechanical ventilation and noninvasive ventilation.

Readability, reliability, and robust resources combine in this outstanding nursing textbook and reference. Designed to prepare nurses for medical-surgical nursing practice and for success on the NCLEX, Brunner & Suddarth's Textbook of Medical-Surgical Nursing, 13th Edition, has been a favorite resource for students, instructors, and practicing nurses for almost a half-century. Its comprehensive yet accessible approach covers a broad range of medical conditions while focusing on the nursing process and the nurse's role in caring for and educating patients and families within today's complex health care delivery system. This edition focuses on physiologic, pathophysiologic, and psychosocial concepts as they relate to nursing care and integrates a variety of concepts from other disciplines such as nutrition, pharmacology, and gerontology. Coverage of the health care needs of people with disabilities, nursing research findings, ethical considerations, and evidence-based practice provides opportunities for readers to refine their clinical decision-making skills. Fully updated and enhanced, this new edition provides a fully integrated solution that promotes clinical judgment, performance, and success on the NCLEX examination and in nursing practice.

Now in its Seventh Edition, DeJong's The Neurologic Examination has been streamlined and updated for a new generation. An absolutely comprehensive, detailed guide to techniques on the neurologic examination, this book integrates details of neuroanatomy and clinical diagnosis in a readable manner. The text is supplemented by helpful boxes that highlight clinical pearls and offer illustrative cases, and tables summarize differentials and lists of clinical findings.

The topics covered in Volume 27 would be of direct relevance to neurospecialists in their day-to-day clinical practice. Advances in multiple sclerosis, ischemic stroke, epilepsy surgery and syringomyelia are elaborated for the reader. There is a comprehensive coverage of management of tumors in eloquent areas. Evidence-based management of spinal metastasis and the scientific evidence for decompressive craniotomy are presented. The controversies regarding the management of recurrent glioblastomas as well as the need to shunt a syrinx associated with Chiari malformation are strongly debated. Allied fields such as radiation therapy and neuropsychology are demystified and explained in a lucid manner.

Trusted by nursing fraternity for more than 50 years, Brunner and Suddarth's Textbook of Medical-Surgical Nursing layers essential patient care information, engaging critical thinking exercises and diverse features to help students learn critical content. The South Asian edition is comprehensively updated to customize and keep pace with South Asia's health care environment by including Indian/Asian epidemiologic data of common diseases and disorders, flowcharts of pathophysiologic processes of various diseases and disorders and psychosocial concepts, which is contemporary to South Asian scenario. Furthermore, essential medical-surgical nursing content and diseases/disorders, which are specific to South Asia, are added to make this textbook most suitable to South Asian learners.

Based on the 4th edition of the renowned textbook of the same name, this softcover manual focuses on the information necessary to make clinical decisions in the ICU. It begins with a crucial section on responding to emergency situations in the ICU. It proceeds to cover the most relevant clinical information in all areas of critical care including critical care monitoring, techniques and procedures, essential physiologic concerns, shock states, pharmacology, surgical critical care, and infectious diseases. The manual also contains thorough reviews of diseases by organ system: cardiovascular diseases, respiratory disorders, neurologic and gastrointestinal disorders, renal, endocrine, skin and muscle diseases, and hematologic/ oncologic diseases. This essential new resource is written in an easy-to-read style that makes heavy use of bulleted lists and tables and features an all-new full color format with a color art program. All critical care providers will find this a useful clinical resource.

This book encompasses the proceedings of a very successful post graduate course entitled "Radiology Today" held in Salzburg in June 1980. It was organised by Dr. Martin W. Donner of

Baltimore and Dr. F. H. W. Heuck of Stuttgart. It was attended by 230 radiologists from 17 countries. The aim was to select a certain number of subjects in diagnostic radiology and in each to have a broad spectrum overview reviewing recent advances presented by an acknowledged expert, followed by a series of rather more detailed papers on various aspects of that field, again given by acknowledged experts drawn from countries throughout Europe and also from the United States of America. This series of presentations on a theme was then followed later the same day by a "workshop" discussion at which the speakers, sometimes joined by other experts from collateral fields of interest, acted as a panel for discussion with the over-view speaker acting as moderator.

Now in vibrant full color throughout, Rogers' Textbook of Pediatric Intensive Care, 5th Edition, continues its tradition of excellence as the gold standard in the field. For more than 25 years, readers have turned to this comprehensive resource for clear explanations of both the principles underlying pediatric critical care disease and trauma as well as how these principles are applied in clinical practice. In the 5th Edition, more than 250 global contributors bring you completely up to date on today's understanding, treatments, technologies, and outcomes regarding critical illness in children.

Anesthesia for Otolaryngologic Surgery offers a comprehensive synopsis of the anesthetic management options for otolaryngologic and bronchoscopic procedures. Authored by world authorities in the fields of anesthesiology and otolaryngology, both theoretical concepts and practical issues are addressed in detail, providing literature-based evidence wherever available and offering expert clinical opinion where rigorous scientific evidence is lacking. A full chapter is dedicated to every common surgical ENT procedure, as well as less common procedures such as face transplantation. Clinical chapters are enriched with case descriptions, making the text applicable to everyday practice. Chapters are also enhanced by numerous illustrations and recommended anesthetic management plans, as well as hints and tips that draw on the authors' extensive experience. Comprehensively reviewing the whole field, Anesthesia for Otolaryngologic Surgery is an invaluable resource for every clinician involved in the care of ENT surgical patients, including anesthesiologists, otolaryngologists and pulmonologists.

Veterinary Anesthesia and Analgesia: the Fifth Edition of Lumb and Jones is a reorganized and updated edition of the gold-standard reference for anesthesia and pain management in veterinary patients. Provides a thoroughly updated edition of this comprehensive reference on veterinary anesthesia and analgesia, combining state-of-the-art scientific knowledge and clinically relevant information Covers immobilization, sedation, anesthesia, and analgesia of companion, wild, zoo, and laboratory animals Takes a body systems approach for easier reference to information about anesthetizing patients with existing conditions Adds 10 completely new chapters with in-depth discussions of perioperative heat balance, coagulation disorders, pacemaker implantation, cardiac output measurement, cardiopulmonary bypass, shelter anesthesia and pain management, anesthetic risk assessment, principles of anesthetic pharmacology, and more Now printed in color, with more than 400 images

Hemodynamics and Cardiology, a volume in Dr. Polin's Neonatology: Questions and Controversies Series, offers expert authority on the toughest cardiovascular challenges you face in your practice. This medical reference book will help you provide better evidence-based care and improve patient outcomes with research on the latest advances. Reconsider how you handle difficult practice issues with coverage that addresses these topics head on and offers opinions from the leading experts in the field, supported by evidence whenever possible. Find information quickly and easily with a consistent chapter organization. Get the most authoritative advice available from world-class neonatologists who have the inside track on new trends and developments in neonatal care. Stay current in practice with coverage on issues such as the clinical implications of near-infrared spectroscopy in neonates, MRI imaging and neonatal hemodynamics, and hybrid management techniques for congenital heart disease.

Advanced Training in Anaesthesia is authored by both trainees and specialists in order to create an authoritative yet accessible text. Containing everything candidates need to know to pass this final major hurdle in anaesthetic training, this book is ideal for exam revision. Suggestions for further reading are included for candidates wishing to read around the subjects. Topics in applied basic science are presented in a systems-based format, as laid out in the syllabus set by the Royal College of Anaesthetists, to allow for easy navigation and structured learning and revision.

Now in paperback, the second edition of the Oxford Textbook of Critical Care addresses all aspects of adult intensive care management. Taking a unique problem-orientated approach, this is a key resource for clinical issues in the intensive care unit.

This reference book compiles the most recent developments in experimental and clinical research and practice in one comprehensive edition. The chapters are written by well recognized experts in the field of intensive care and emergency medicine. It is addressed to everyone involved in internal medicine, anesthesia, surgery, pediatrics, intensive care and emergency

medicine.

This volume provides a comprehensive look into the innovative methods used to explore the visual system. From the way the brain processes vision, an imperative part of the human experience, to the role eye movement plays in a range of questions concerning visual perception, memory, attention, free will, and even topological diagnoses, this in-depth handbook gives neurologists, ophthalmologists, and neuro-ophthalmologists an invaluable tool to help them better understand the visual system. Disorders of the retinal and cerebral cortex, and those that affect control of eye and lid movements are thoroughly discussed, along with groundbreaking visual rehabilitative methods, and chapters on individual parts of the visual system. Practitioners will find a useful resource that lays out fundamental concepts, while seamlessly summarizing clinical and laboratory methods for neuro-ophthalmological evaluation. The material is perfect for early-stage physicians or long practicing specialists who wish to learn the latest developments in the field. \* A comprehensive resource that explores the innovative methods used to understand the visual system \* An in-depth study of how the brain processes vision, and the role certain functions such as eye movement play in visual diagnosis and memory \* Clinical and laboratory methods of evaluation that are perfect for physicians and specialists in any stage of practice

Evaluates newer and established techniques of body composition assessment.

HLA from Benchtop to Bedside provides the reader with a comprehensive, concise and thoroughly up-to-date book on all aspects of the HLA system, including new techniques and methodologies. Each chapter begins with bullet point lists of principle learning points, including comprehensive references and validated links to international resources. Written by a diverse range of international academics for professionals, researchers, undergraduate and graduate students, this book is ideal for organ and stem cell transplant professionals, histocompatibility laboratory professionals and staff, medical residents and fellows on transplant services, medical students, and students in clinical laboratory science. The book's author, Dr. Arthur Bradley Eisenbrey, is an experienced transplant pathologist who has held significant academic and leadership positions in the field. Reviews current knowledge surrounding the HLA system Covers current methodologies and utilization of histocompatibility testing Authored by a leader in the field of histocompatibility and transfusion medicine

Genius Belabored is the fascinating story of Ignaz Semmelweis, a nineteenth-century obstetrician ostracized for his strident advocacy of disinfection as a way to prevent childbed fever, a leading cause of mortality in new mothers.

This is a book for clinician educators. It offers modern, evidence-based practices to use in teaching learners at a range of levels, with an emphasis on concrete strategies that teachers can implement in their own clinical practices as well as in small and large group settings. Medical education is rapidly changing with emerging evidence on best practices and a proliferation of new technologies. As strategies for effectively teaching medical learners evolve, it is important to understand the implications for Pulmonary, Critical Care, and Sleep Medicine (PCCM). This text is structured to allow easy access to the reader. Chapters are organized around level of learner (e.g., medical student to PCCM fellow to practicing physicians) as well as the location of teaching. Given the variety of clinical settings in which PCCM physicians teach, specific consideration of best practices, broad changes in curricular design and pedagogy are considered in different clinical contexts. Each chapter begins with a focus on why the topic is important for clinician educators. A review of the available evidence and relevant medical education theory about the topic follows, with examples from specific studies that provide insight into best practices regarding the concepts and topics discussed in the chapter. For chapters focusing on learners, different environments are considered and similarly, if the focus is on the learning environment, attention is paid to the approach to different learners. Each chapter ends with a summary of the primary points from the chapter and concrete examples of how clinician teachers can put the concepts discussed in the chapter into practice. This is an ideal guide for educators in pulmonary, critical care, and sleep medicine.
