

Introduzione Alleconomia Dellambiente

The scope, depth and persistence with which this book explores carbon pricing is admirable, reflecting that despite political reluctance it is a topic in all parts of the world. _ Mikael Skou Andersen, Aarhus University, Denmark and European Environment Agency Environmental taxation and emissions trading continue to be high on the public policy agenda in many countries, and this is another welcome and very interesting volume in the Critical Issues in Environmental Taxation series that presents new ideas and evidence on these subjects from a wide range of countries and a variety of perspectives. _ Paul Ekins, University College London, UK This original and timely volume provides unique insights and analysis on the pressing question of how to achieve environmental sustainability while fostering economic growth. The emphasis of the book lies in finding critical solutions to global climate change including chapters on environmental fiscal reform and unemployment in Spain, EU structural and cohesion policy and sustainable development, ecological tax reform in Europe and Asia, Australia's carbon pricing mechanism, and many other timely topics. This insightful volume will appeal to policy makers in government as well as academics and students in environmental law, environmental economics and environmental sustainability.

Economia e diritto sono discipline complementari, inscindibili. Una cultura giuridica che si estenda ai principi dell'economia politica contribuisce alla funzionalità dell'ordinamento, al progresso economico. Ne beneficiano gli stessi operatori del diritto, nella loro quotidiana attività professionale. Questo libro è stato realizzato da un gruppo di economisti e giuristi della Banca d'Italia, con l'intento di cogliere gli elementi fondanti delle categorie economiche che trovano corrispondenza in istituti comuni alle società moderne. Vengono presi in particolare considerazione mercati, impresa, lavoro, finanza, relazioni internazionali. L'accento è posto sui rapporti che collegano più strettamente il mondo dell'economia con le manifestazioni dell'esperienza giuridica (proprietà, contratto, responsabilità). I saggi che compongono il volume costituiscono un insieme organico, sebbene conservino ciascuno la propria individualità analitica e critica, consentendo più di un percorso di lettura. Presentano i concetti e gli strumenti essenziali della riflessione economica in un linguaggio accessibile. Si propongono anche come aggiornata introduzione per chi si accosti all'economia movendo da un prevalente interesse per gli aspetti istituzionali della società.

This book focuses on the European Union Emissions Trading Scheme (EU ETS), backbone of the European Union strategy to combat climate change, and its industry competitiveness implications. In light of the discussion of the revision for the coming years, this book aims to provide a toolbox of key elements to understand the EU ETS's functioning and to reflect on crucial improvements. Specifically, besides a general overview of the first phases of the scheme and current difficulties, this book aims to (i) deploy an energy-intensive sector-level analysis, with both reference to academic literature (ex ante and ex post studies, paying a special attention to the underlying assumptions) and stakeholders positions on carbon leakage issue; (ii) present an overview of the existing ETS policy measures and worldwide experiences; (iii) reflect on the ongoing reform for the post-2020 period, starting from the European Commission's proposal and entering the technical and political debate taking place within the European institutions. The EU ETS and the European Industry Competitiveness provides the reader with a full understanding of the system, presenting problems, policy options, design aspects and global insights. It aims to identify potential improvements and to draw lessons for the coming years and the future phases, assessing if the current reform is actually on track to adequately protect business competitiveness. Passionate about economic policy, the author wrote her Master's thesis on the EU ETS and competitiveness. This book develops from that project. (Series: European Energy Studies, Vol. 10) [Subject: Energy Law, EU Law]

Energie rinnovabili, chimica verde, risorse e rifiuti, mobilità sostenibile, industria agroalimentare, ecofinanza, green building, foreste, sicurezza del territorio, green marketing e advertising, green fashion, benessere naturale, giornalismo ed editoria ambientale, turismo sostenibile. Non c'è comparto produttivo che non sia stato investito dalla rivoluzione della green economy: la riduzione degli sprechi e la sostenibilità ambientale e sociale dei processi produttivi sono infatti considerati gli elementi chiave della strategia per superare la crisi, come dimostrato anche dal numero crescente di cittadini e clienti che si orientano verso aziende e prodotti verdi. Oltre a un'analisi approfondita dei vari settori della green economy e alla lista dei 125 lavori verdi più richiesti, per ognuno dei quali vengono descritti i percorsi di formazione, la Guida ai green jobs è arricchita da più di cinquanta interviste ai protagonisti della trasformazione che sta investendo anche il nostro paese, e che potrebbe proiettarlo nell'economia del futuro. - See more at:

Gli impatti ambientali e il mancato rispetto dell'habitat in cui viviamo costituiscono un danno costoso che si ripercuote con criticità sulla nostra salute e sulla tutela della biodiversità in genere. Prenderne atto e far sì che la presa di coscienza in t

New Tools of Economic Dynamics gives an introduction and overview of recently developed methods and tools, most of them developed outside economics, to deal with the qualitative analysis of economic dynamics. It reports the results of a three-year research project by a European and Latin American network on the intersection of economics with mathematical, statistical, and computational methods and techniques. Focusing upon the evolution and manifold structure of complex dynamic phenomena, the book reviews and shows applications of a variety of tools, such as symbolic and coded dynamics, interacting agents models, microsimulation in econometrics, large-scale system analysis, and dynamical systems theory. It shows the potential of a comprehensive analysis of growth, fluctuations, and structural change along the lines indicated by pioneers like Harrod, Haavelmo, Hicks, Goodwin, Morishima, and it highlights the explanatory power of the qualitative approach they initiated.

This volume provides an overview of the ways the Italian school of quality of life studies addresses well-being and quality of life, from both a substantive and a methodological point of view. It discusses various topics such as those of equitable and sustainable wellbeing, lifestyles, the organization of economy and welfare, as well as aspects related to the measurement of quality of life in small towns, institutional transparency and corruption prevention indicators. Chapters presented in this volume are drawn from papers presented at the conferences of the Italian Association for Quality of Life Studies (AIQUAV) held in Florence, Italy, in 2015 and 2016. The volume is organised into three parts. The first part is

devoted to methods and indicators for research on quality of life, the second part to social sustainability, lifestyles, cultural aspects and local applications, and the third to economy, welfare and quality of life. The volume hosts contributions that are interdisciplinary in scope and mirror the complexity of the globalized world.
