Organic Chemistry. The mere phrase strikes fear in the heart of many students.

Featured as the class that crushes dreams and dashes hopes, thousands of students take the course every year. It can be the first few chapters of organic chemistry that dash the hopes of many pre-meds and biologists, and often, chemists and chemical engineers. This book here provides new help for students struggling through the first sections of organic chemistry: from molecular bonding to hybridization to dot structures and beyond. The material begins easy enough with a review of general chemistry, and stuff that should be a review for many students, especially if the course followed gen chem 1. Then the fun begins. The introduction of isomers and nomenclature adds the first level of complexity to a tough subject. Organic chemistry at this point moves from rote memorization and familiarity with the periodic table to a spatial science, where seeing the longest chain, or the ways of rearranging C atoms are not always apparent. Thus the organic chemistry professor is left with several trick questions that provide the class its curve, and sends the first batch of students to the chopping block, where some escape with a "W" and others, with more stubbornness, take their "F"s later on. Subjects covered: What is organic chemistry? Bonds Molecular Formula Saturation Chemistry Resonance Skeletal Drawings Molecular Hybridization Acids and Bases From 2D to 3D Isomers Stereoisomers (alkenes) Molecular Attractive Forces Hydrogen

Bonding Nomenclature (alkanes and cycloalkanes) This is the first book in the series, and the second one I've written on this subject. Future books will be based on this format, and will probably be much easier to get out for me, the author. I am a Ph.D. geochemist who has tutored students extensively in organic chemistry. As I learned quickly in tutoring, the only way to successfully learn (and teach) the subject is to do it over and over. This book should not be used to replace your attendance in organic chemistry, but to supplement the course. Feedback is instant, and there are a lot of questions you can answer (including 2 quizzes with 20 questions each). This book will help you pass (or even ace!) Organic Chemistry. The price is right, too! Because the exams are interactive (you click on your answer) I strongly recommend using a touch-enabled device to read this book.

The perfect way to prepare for exams, build problem-solving skills, and get the grade you want! Offering detailed solutions to all in-text and end-of-chapter problems, this comprehensive guide helps you achieve a deeper intuitive understanding of chapter material through constant reinforcement and practice. The result is much better preparation for in-class quizzes and tests, as well as for national standardized tests such as the DAT and MCAT. **PREFACE** This book provides an accurate and complete representation of the Advanced Placement Examination in Chemistry. Our six practice exams are based on the most recently administered Advanced Placement Chemistry Exams. Each exam is three hours in length and includes every type of question that can be expected on the actual exam. Following each exam is an answer key complete with detailed explanations designed to clarify and contextualize the material. By completing all six exams and studying the explanations which follow, you can discover your strengths and weaknesses and thereby become well prepared for the actual exam. The formulas and tables for the AP Chemistry Exam can be found at the back of this book, beginning on page 417. You will be provided these formulas and tables when you take the actual exam. You should also use this material when taking the practice tests in this book.

**ABOUT THE TEST** The Advanced Placement Chemistry Examination is offered each May at participating schools and multi-school centers throughout the

world. The Advanced Placement Program is designed to allow high school students to pursue college-level studies while attending high school. The participating colleges, in turn, grant credit and/or advanced placement to students who do well on the examinations. The Advanced Placement Chemistry course is designed to be the equivalent of a college introductory chemistry course, often taken by chemistry majors in their first year of college. Since the test covers a broad range of topics, no student is expected to answer all of the questions correctly. The exam is divided into two sections: 1) Multiple-choice: Composed of 75 multiple-choice questions designed to test your ability to recall and understand a broad range of chemical concepts and calculations. This section constitutes 45% of the final grade and you are allowed 90 minutes for this portion of the exam. Calculators are not permitted for this section of the exam. 2) Free-response section: Composed of several comprehensive problems and essay topics. This section constitutes 55% of the final grade and the student is allowed 90 minutes for this portion of the exam. You may choose from the questions provided. These problems and essays are designed to test your ability to think clearly and to present ideas in a logical, coherent fashion. You can bring an electronic hand-held calculator for use on the 40-minute free-response section. Essay and chemical-reaction questions comprise the last 50 minutes of the test,

during which calculators are not permitted. A final note about calculators: Most hand-held models are allowed in the test center; the only notable exceptions are those with typewriter-style (QWERTY) keypads. If you are unsure if your calculator is permitted, check with your teacher or Educational Testing Service.

**SCORING** The multiple-choice section of the exam is scored by crediting each correct answer with one point, and deducting only partial credit (one-fourth of a point) for each incorrect answer. Omitted questions receive neither a credit nor a deduction. The essay section is scored by a group of more than 1,000 college and high school educators familiar with the AP Program. These graders evaluate the accuracy and coherence of the essays accordingly. The grades given for the essays are combined with the results of the multiple-choice section, and the total raw score is then converted to the program's five-point scale: 5 - Extremely well qualified 4 - Well qualified 3 - Qualified 2 - Possibly qualified
