Air cargo is a key element of the global supply chain. It allows outsourcing of manufacturing to other countries and links production in both multinational and smaller enterprises. It has also been the most important driver of certain export industries in countries such as South Africa, Kenya and Chile. As a component of the air transport industry, air cargo makes the crucial difference between profit and loss on many long-haul routes. For some network combination carriers it accounts for up to half of total tonne-kms flown, and as much as one quarter of total revenue. In addition, the integrated carriers such as DHL, FedEx and TNT have their own fleets of dedicated freighter aircraft, and cargo aircraft operators like Cargolux and Nippon Cargo have a specialist role in the industry. Featuring expert analysis and worked examples to enhance understanding, *Moving Boxes by Air* by Peter Morrell offers a comprehensive and up-to-date guide to the business and practices of air cargo, with a chapter dedicated to each key issue, such as: current trends, market characteristics, regulation, airport terminal operations, pricing and revenues, and environmental impacts.

Foreign direct investment (FDI) in Africa by developing Asian economies is growing and has the potential to reach much higher levels. The present report notes that Africa-bound FDI is still a small percentage of the rapidly climbing foreign investments being made by Asian transnational corporations. The rapid economic growth in Asia can be expected to lead to increased Asian investments in Africa, in both natural resources and manufacturing. In particular, the rapid industrial upgrading taking place in Asia provides ample opportunities for Africa to attract efficiency-seeking and export-oriented FDI from Asian economies.

Over the past decade, four major developments in global economic integration have shaped trade policy and the economic performance of countries within the Middle East and North Africa region: the emergence of global supply chains, the growth of trade in services, the rise of China and India as major international trading powers, and regional integration. These developments, along with the labor and natural resource endowments of particular countries (some are resource-poor but labor-abundant, some resource-rich and labor-abundant, and some resource-rich and labor-importing), have influenced export diversification outcomes across the region. Yet these countries may not be taking full advantage of all of the opportunities the four new trends offer to them. 'Trade Competitiveness of the Middle East and North Africa: Policies for Export Diversification' examines the region's trade policy agendas and their results by focusing on the countries' response to these four key developments in international trade. As the region recovers from the global financial and economic crises, the book identifies reforms that could allow countries to further strengthen global production networks, benefit more from trade in services, better compete in external markets to face the rise of China and India, and reach the full potential of regional integration. If thoroughly implemented, especially by oil exporters, all of these reforms could help boost growth and job creation in the region.

By far the most comprehensive book on the subject, the completely new Second Edition of Airport Operations updates the many developments in this fast-changing industry. The book provides a broad perspective on the effects of deregulation, privatization, and commercialization. Thoroughly illustrated, it examines the most current practices in airport security and terminal access, cargo relations, noise control, scheduling issues, and more. It is equally valuable to aviation educators and students as well as to airport personnel.

Africa is brimming with potential and enthusiasm. With foresight and commitment from industry leaders and support from governments, aviation could become one of the continent's great strengths. Yet today, Africa's aviation industry lags behind much of the world, the disparity visible in its run-down airports and its airlines. But this discrepancy is not inevitable.. In Fly Africa, Hassan El-Houry, a pioneer in the African aviation industry, and Eric Kacou, an African strategist and investor, explain how the continent reached its current state, examining the huge disparities between Africa's handful of hubs and its many underserved cities and countries. Then they map a route to transforming the continent's aviation, highlighting its existing champions and illustrating the effects aviation can have on other sectors. Aviation can provide a lifeline to revitalize national economies throughout Africa and contribute to development. This book--a must-read for anyone who believes in Africa--shows how it's possible.

Aviation is one of the most regulated industries in the world. Much of this regulation is safety-related, to mitigate the inherent risks tied with air transport. But aviation is also subject to economic regulation that influences which airline flies which route, at which frequency, capacity and price. It even stipulates the nationality of its owners and decision makers. Aviation has freed itself from some restrictions over the past three decades, with many benefits to society. Yet liberalisation has also raised issues with regard to maintaining fair competition, high labour standards and mitigating aviation's growing environmental impact.

This book walks readers through an outsourcing transaction step-by-step: analyzing the benefits, selecting vendor, structuring the deal, managing the relationship. Provides managers with an organized methodical approach to the often intimidating prospect of relinquishing absolute control of every aspect of a company's business.

Amendments to the 2003 edition of CAP 642 (February 2003, ISBN 0860399095)

In July 2012, the Government consulted on its strategy for aviation, the draft Aviation Policy Framework. This final Aviation Policy Framework will fully replace the 2003 Air Transport White Paper (Cm.6046, ISBN 9780101604628) on aviation, alongside Government decisions following the recommendations of the Independent Airports Commission, established September 2012. The Aviation Policy Framework is underpinned by two core principles: (i) Collaboration: achieved by working together with industry, regulators, experts, local communities to identify workable solutions; (ii) Transparency: decision making based on clear, independent information and processes. The Framework Policy covers the following areas: (1) Supporting growth and benefits of aviation; (2) Managing aviation's environmental impacts, such as climate change and noise pollution; (3) The role of the Airports Commission; (4) Other aviation objectives, including: protecting passenger' rights; competition and regulation policy; airspace; safety; security and planning.

This book is one of the first to explore aviation and aircraft leasing and its values establishing it as a standalone investable asset class within the larger real assets industry. Airplanes are a crucial but capital-intensive component of the global economy. The author, as an academic, researcher, appraiser, advisor and businessperson in the industry, bridges a gap in the existing literature with his analysis of the underlying aviation asset class return and risk profile. The book describes the characteristics, dynamics and drivers of the global, Asia and China specific aviation and leasing landscapes. Recent effects of COVID-19 on aviation and an analysis of the drivers affecting cross border mergers and acquisitions in the industry are also investigated. The book includes 20+ years of empirical aircraft valuation evidence and analysis of its characteristics establishing the aircraft and sub-segments as asset classes. In addition, characteristic comparisons to other real asset subclasses and benchmarks are examined. This book will be of interest to academics, financiers, investors, industry participants and more general aviation enthusiasts.

This second edition of *Moving Boxes by Air* offers a comprehensive and up-to-date guide to the business and practices of air cargo, with chapters dedicated to key issues such as current trends, market characteristics, regulation, airport terminal operations, pricing and revenues, and environmental impacts. The book illustrates the recent emphasis on mergers at the expense of alliances, which have not had the impact that they had on passenger operations. The section on security has been expanded to assess in more depth the threats to aircraft from terrorists, particularly in the lower cargo and passenger baggage compartments. Surcharges are examined and the book considers whether all airlines will follow the lead of some to do away with both fuel and security surcharges. The book concludes with a summary of the latest industry forecasts. Fully updated throughout, this edition is the definitive guide to air cargo for professionals within both the aviation and freight industries.

In *21st Century Airlines: Connecting the Dots*, Nawal Taneja addresses the challenges and opportunities facing the airline industry as it tries to innovate and create products and services that are radically different by 'connecting the dots' at four key levels: recognizing the implications of global events, improving cross-functional collaboration within the organization, working more closely with the travel chain, and providing much higher engagements with connectors within the social networks. The book synthesizes insights gained from the experience of non-traditional businesses, such as Uber, that have no physical assets and that focus on scalability through platforms, as well as traditional businesses, such as Mercedes-Benz, that are transitioning from operators of physical assets to adapt to the on-demand and sharing economies. These insights show pragmatically that digitizing airline businesses would require digital mind-sets, digital technologies, digital strategies, and digital workplaces to explore new frontiers in value for both customers and airlines. Moreover, forward-thinking airlines need to consider working with bimodal organizational structures, in which one group optimizes current business models (network, fleet, and schedule planning, as well as revenue management) while a second group explores innovative ways to add digital features to physical products to provide a consistent experience throughout the journey. The book is written for all senior-level practitioners of airlines and related businesses worldwide, as well as senior-level government policymakers.

Das Werk gibt einen umfassenden Überblick über ökonomische, rechtliche und technische Aspekte der Unternehmen im Luftverkehr. Das Buch wendet sich als Lehrbuch an Studierende, Auszubildende und Trainees, die sich erstmal mit Luftverkehrsunternehmen befassen, Zugang zu ihrem Berufsfeld finden, über den eigenen Betrieb hinaus schauen und einen umfassenden Überblick gewinnen wollen, als Handbuch an Praktiker, die mehr über die Hintergründe des Tagesgeschäfts und die Grundstrukturen und Entwicklungen des Luftverkehrs wissen wollen, als Informationsquelle an alle am Luftverkehr interessierten Leser. Die Entwicklung des Luftverkehrs seit dem Jahr 2003 erforderte eine umfangreiche Überarbeitung des Buches. This third edition of *Straight and Level* thoroughly updates the previous edition with extensive comments on recent industry developments and emerging business models. The discussion is illustrated by current examples drawn from all sectors of the industry and every region of the world. The fundamental structure of earlier editions, now widely used as a framework for air transport management courses, nonetheless remains unchanged. Part 1 of the book provides a strategic context within which to consider the industry's economics. Part 2 is built around a simple yet powerful model that relates operating revenue to operating cost; it examines the most important elements in demand and traffic, price and yield, output and unit cost. Part 3 probes more deeply into three critical aspects of capacity management: network management; fleet management; and revenue management. Part 4 concludes the book by exploring relationships between unit revenue, unit cost, yield, and load factor. *Straight and Level* has been written primarily for masters-level students on aviation management courses. The book should also be useful to final year undergraduates wanting to prepare for more advanced study. Amongst practitioners, it will appeal to established managers moving from functional posts into general management. More broadly, anyone with knowledge of the airline industry who wants to gain a deeper understanding of its economics at a practical level and an insight into the reasons for its financial volatility should find the book of interest.

ACRP Report 78: "The original problem statement and objectives for ACRP 02-16 as developed by the project panel are restated as follows: 'Increased levels of demand at airports in the United States may result in a growth in airport GSE activity and an associated increase in airport surface emissions. Local air quality and global climate change concerns, regulatory pressures, and the desire to be environmentally responsible have resulted in a growing number of airport programs around the United States looking to assess and reduce airport emissions. Although much is known about aircraft fleets, operations, and emissions, comparatively little is known about GSE. The available GSE data are outdated, unreliable, and limited. Accurate GSE data are needed by the FAA and airport sponsors to plan adequately and to balance the growing demands of air travel with air quality concerns. Proactive strategies that reduce surface emissions may help airports address air quality concerns. As such, research is needed to obtain additional information on GSE equipment and to identify programs and best practices that could reduce GSE emissions for GSE owners, operators, and airports.' In response to this problem statement, the primary objectives of this research were to (1) develop a tutorial that describes GSE operations and identifies potential strategies to reduce emissions from powered GSE for use by GSE owners and operators and (2) conduct a representative inventory of powered GSE at airports to help the industry assess the contribution of GSE to air quality impacts at airports. ." --from p. 1.

In this collection, 17 leading scholars based in Solomon Islands, Fiji, Papua New Guinea, Timor-Leste, Australia, New Zealand, the United States and China analyse key dimensions of the changing relationship between China and the Pacific Islands and explore the strategic, economic and diplomatic implications for regional actors. The *China Alternative* includes chapters on growing great power competition in the region, as well as the response to China's rise by the US and its Western allies and the island countries themselves. Other chapters examine key dimensions of China's Pacific engagement, including Beijing's programs of aid and diplomacy, as well as the massive investments of the Belt and Road Initiative. The impact of China's rivalry for recognition with Taiwan is examined, and several chapters analyse Chinese communities in the Pacific, and their relationships with local societies. The *China Alternative* provides ample material for informed judgements about the ability of island leaders to maintain their agency in the changing regional order, as well as other issues of significance

to the peoples of the region. 'China's "discovery" of the diverse Pacific islands, intriguingly resonant of the era of European explorers, is impacting on this too-long-overlooked region through multiple currents that this important book guides us through.' —Rowan Callick, Griffith University 'The China Alternative is a must-read for all students and practitioners interested in understanding the new geopolitics of the Pacific. It assembles a stellar cast of Pacific scholars to deeply explore the impact of the changing role of China on the Pacific islands region. Significantly, it also puts the Pacific island states at the centre of this analysis by questioning the collective agency they might have in this rapidly evolving strategic context.' —Greg Fry, The Australian National University
