The early childhood field has long understood that targeting the intersection of health and learning is integral to serving children, especially those from disadvantaged backgrounds. Yet this developmentally informed educational philosophy has been jeopardized by an increased emphasis on standards-based accountability. In this book, the authors explain why healthy learning is good for children, schools, and society and they suggest concrete ways to make it happen. Moving back and forth between national statistics and the intimate voices of parents, teachers, and service providers in a large urban school district, they formulate an action plan for educating the whole child and reducing educational inequities. While the book covers a broad spectrum of American children, special attention is given to the growing population of Mexican immigrant children. Chapters include: Issues to Ponder, Keywords, Take-Home Messages, and Next Questions.

proposed bill. Patient Protection and Affordable Care Act or Obamacare, is a United States federal statute which, at the same time, represents the complete reform of the American health care system conducted by the former president Barack Obama. The main goal of this act was to drive better health outcomes, lower costs, and improve accessibility to health services. The whole system was designed to increase health insurance quality and affordability, lower the uninsured rate by expanding insurance coverage and reduce the costs of healthcare. In March 2017 the Republican Party, which opposed Obamacare, released its plan to replace it.

in 679 schools, 67 counties and 13 provinces throughout China. They also conducted longitudinal case studies in five municipalities and provinces to better reflect education reform and development in different education levels or sectors. The authors used national statistical data from the 1970s to 2013, as well as a wealth of first-hand documents and data from different levels of educational departments in schools, counties, municipals and provinces and “grass-roots” input from 253 teachers, principals, education administrators and students. The authors applied SEM, HLM, GCM, and many other statistic techniques and qualitative methods to analyse the data and materials in order to explore correlations between development and reform, internal and external factors in educational reforms, as well as strategies for resolving core issues. Their findings indicate that institutional reforms concerning financial investments, allocation of teaching resources, allocation of facilities, curricula design systems, and political, economic, social system reforms all contribute to the development of different levels and types of education in different modes and to different extents. Topics of particular interest include five case studies conducted in five different municipalities and provinces that showcase the nation’s education reform and development in a specific model and on the basis of substantial data. Further, milestone events regarding educational reform and development that have taken

place in China since 2013 are examined. As a unique feature, the book also includes 353 diagrams and tables on the development and reform of education in China, offering extensive and up-to-date information on a part of the world that often remains difficult to access. The book provides an expansive and in-depth examination of the nation's education reform and development, from its historical roots to the present, and combining official and “grass-roots” standpoints. It will help readers to understand why and how Chinese education could lead students to win in international comparisons like PISA while at the same time often being the target of scathing criticism, as well as how the nation is now working to provide a better education to serve the world's largest population.

How charter schools have taken hold in three cities—and why parents, teachers, and community members are fighting back Charter schools once promised a path towards educational equity, but as the authors of this powerful volume show, market-driven education reforms have instead boldly reestablished a tiered public school system that segregates students by race and class. Examining the rise of charters in New Orleans, Chicago, and New York, authors Raynard Sanders, David Stovall, and Terrenda White show how charters—private institutions, usually set in poor or working-class African American and Latinx communities—promote competition instead of collaboration and are

driven chiefly by financial interests. Sanders, Stovall, and White also reveal how corporate charters position themselves as “public” to secure tax money but exploit their private status to hide data about enrollment and salaries, using misleading information to promote false narratives of student success. In addition to showing how charter school expansion can deprive students of a quality education, the authors document several other lasting consequences of charter school expansion: • the displacement of experienced African American teachers • the rise of a rigid, militarized pedagogy such as SLANT • the purposeful starvation of district schools • and the loss of community control and oversight A revealing and illuminating look at one of the greatest threats to public education, *Twenty-First-Century Jim Crow Schools* explores how charter schools have shaped the educational landscape and why parents, teachers, and community members are fighting back.

Why should every student take a computing course? What should be the content of these courses? How should they be taught, and by whom? This book addresses these questions by identifying the broader reaches of computing education, problem-solving and critical thinking as a general approach to learning. The book discusses new approaches to computing education, and considers whether the modern ubiquity of computing requires an educational approach that is inherently interdisciplinary and distinct from the traditional computer science perspective. The alternative approach that the authors advocate derives its mission from an intent to embed itself within an
