Car manufacturing involves the movement of large numbers of heavy, awkward objects incorporating some 20,000 parts, through a large number of short cycles. As to be expected the constant flow of the processes involved is disrupted by both the inherent complexities of production and those of market restrictions. This study, a unique blend of analysis, history and case studies, not only characterizes the essence of car manufacturing but also explains the links between production, market conditions and financial results and constraints. At the same time, it challenges fashionable views on the car industry and rejects the current preference for facile dichotomies (e.g. mass production vs. lean production; Japan vs. America; freedom vs. regulation). However, it also shows that the failure of BMC, the largest failure in the industry to date, cannot be attributed to its incomplete adoption of the best system.
